| 13. extra Flying Fish Roe | 1.00 |

Nutrition Value of Fish Japanese longevity is linked to fish diet. Fresh fish contains high proportions of protein, amino acids and vitamins. All are indispensable for healthy body. Fish contains far less cholesterol and saturated fat than either beef or pork. In fact, such fish as tuna, mackerel, sardine, bonito and horse mackerel contain healthy levels of cicosapentaenoic acid, which helps to reduce the level of cholesterol and prevents hardening of the arteries. If you are on a weight reduction diet, fish is an ideal food. It should be also noted that seaweed(Nori) is rich in vitamin A, B1 and B2.

CONSUMER ADVISORY Our menu items may contain raw or undercooked ingredients. Consuming raw or undercooked meats, poultry, seafood, shellfish or eggs may increase your risk of foodborne illness, especially if you have certain medical conditions. FDA Food Code (3-603-11)
